

cubeSQL ReadMe

If you have installed an old copy of the REAL Server (or REAL SQL Server) just use the Remove REALServer application in order to cleanup your system (your databases and settings will NOT be deleted!).

1. Install cubeSQL using cubeSQL.pkg installer.
2. If you decided to install the StartupScripts then cubeSQL will automatically be launched when your computer starts-up. Note that in order to start/stop server you can use the cubeSQL PreferencePane installed in your system.
3. Once the server is running (started by either a restart of your Mac or using the Preference Pane) you can connect to it using the Admin application located inside the main cubeSQL folder (installed into your Application folder)
4. Connect to a running server using the default values (default username is **admin** and default password is **admin**).
5. Now you can read the Admin Manual in order to fully understand how to administer your server and how to register it and then read the Language Reference in order to know all the custom commands recognized by the server. Please remember that the server is by default in autotransaction mode, that means that all your sql statement must be finalized with a COMMIT sql command.
